# Apex Paradox Strategy (Phase 1) - Autoplay Settings

1. Initial Setup:

   - Bankroll: Start with your total balance.

   - Base Bet: Set to 0.1%-0.5% of your bankroll.

   - Payout: Set to 2x (50% win chance).

   - Roll Choice: Select either "Over 50" or "Under 50" (stick to one).

2. Autoplay Settings:

   - **On Win:** Reset bet to base bet.

   - **On Loss:** Keep the bet at base bet.

   - **Stop Conditions:**

     - Stop autoplay after gaining 10%-15% profit.

     - Stop autoplay if balance drops by 10% to prevent deep losses.

3. Adaptation Triggers:

   - **After 3 Wins:** Increase bet by 10%-15%.

   - **After 3 Losses:** Either pause autoplay briefly or reduce bet by 5%-10%.

4. Randomization Tactics:

   - Every 10-15 rounds, manually stop and restart autoplay with a minor setting tweak (e.g., slightly different base bet or roll selection).

   - Adjust the timing of when autoplay is restarted to prevent pattern recognition.

5. Execution Process:

   - Set autoplay with the above parameters.

- Let it run until a stop condition is met.

- If profit target is reached, reset and reassess.

- If loss limit is hit, stop and review before continuing.

This autoplay strategy ensures steady bankroll growth while avoiding detection from the system by introducing controlled variations.
