Apex Paradox Strategy - Stake.us Autoplay Implementation

Step-by-Step Autoplay Configuration for Stake.us

1. **Base Settings:**

   - Navigate to the Dice game on Stake.us.

   - Click on the **Autoplay** option.

   - Set the **Base Bet** to 0.1%-0.5% of your bankroll.

   - Set the **Payout** (Multiplier) to **2x** (50% win chance).

   - Choose either **Over 50** or **Under 50** (stick with one).

2. **Win Condition:**

   - In the "On Win" section, set it to **Reset to Base Bet**.

3. **Loss Condition:**

   - In the "On Loss" section, set it to **Keep Bet the Same**.

4. **Stop Conditions:**

   - Enable **"Stop if profit reaches X%"**, setting it between **10%-15%** of your bankroll.

   - Enable **"Stop if balance decreases by X%"**, setting it at **10% loss**.

5. **Additional Tweaks for Randomization:**

   - Every **10-15 rounds**, manually stop and restart autoplay.

   - Slightly tweak base bet or roll selection occasionally to prevent pattern recognition.

6. **Execution Process:**

- Activate **Autoplay** with the above settings.

- Let it run until a stop condition is triggered.

- If the profit target is reached, reset and reassess.

- If the loss limit is hit, stop and review before continuing.

By structuring the conditions properly, this method ensures a steady bankroll increase while preventing detection by introducing controlled variations.
